

The User Manual

Archari Khemthong 6730202751 section 800

1. Installation Guide

This section describes the steps and prerequisites for system installation, divided into 3 main parts: Software Preparation, Database Management, and Running both Frontend and Backend applications.

1.1 System Requirements and Prerequisites

Before beginning the installation, please ensure that the following software is installed on your development machine or server:

- Git: For downloading the source code from GitHub.
- Node.js (Version 18.x or higher recommended): For running the backend file (server.js).
- XAMPP / WAMP or MySQL Server: For managing the database and using phpMyAdmin.
- PuTTY (or FileZilla / WinSCP): SSH and SCP tools for connecting and uploading files to a remote server.

1.2 Steps for Downloading the Project from GitHub

1. Open Terminal or Command Prompt on your computer.
2. Use the git clone command to download the source code to your machine:

```
git clone https://github.com/USERNAME/YOUR-REPOSITORY-NAME.git
```

3. Navigate into the project directory:

```
cd YOUR-REPOSITORY-NAME
```

1.3 Database Configuration

1. Open XAMPP Control Panel and start both the Apache and MySQL services.
2. Open a web browser and navigate to <http://localhost/phpmyadmin>.
3. Create a new database by giving it the exact name specified by the system (e.g., `my_app_db`).
4. Select the newly created database, then click the Import tab.
5. Choose the `.sql` database file located in the project folder, then click Go / Import to import the database structure and initial data.

1.4 Installation & Setup

Step 1: Preparing and Uploading Backend Files (`server.js`) to the Server via PuTTY / SSH

1. Connect to the Remote Server by opening PuTTY, entering the Server's IP address, and connecting via SSH.
2. Upload the `server.js` file, along with environment configuration files (such as `.env` or DB Config files), to the target directory on the Server using FileZilla or SCP commands.
3. Open the terminal in PuTTY, navigate to the Backend directory, and install the required dependencies.

```
npm install
```

1.5 Environment Variables Setup (`.env`)

Since the `.env` file containing sensitive passwords and configuration settings is not included in the GitHub repository for security reasons, you must create a new `.env` file inside the project directory (in the same location as `server.js`) before running the system.

Steps to Create and Configure the .env File:

1. Create a new file in the project folder named .env (including the leading dot).
2. Add your database connection details and server port based on the structure below:

Code snippet

```
# Port for running the Backend server
```

```
PORT=5000
```

```
# MySQL Database connection settings
```

```
DB_HOST=localhost
```

```
DB_USER=root
```

```
DB_PASS=
```

```
DB_NAME=my_app_db
```

(Note: Adjust the DB_HOST, DB_USER, DB_PASS, and DB_NAME values to match the MySQL / phpMyAdmin setup on your machine.)

Database Connection in server.js:

To allow server.js to read values from the .env file and connect to the database, ensure the dotenv library is imported and configured in server.js as follows: JavaScript

```
// 1. Load dotenv to read variables from the .env file
```

```
require('dotenv').config();
```

```
const mysql = require('mysql2');
```

```
// 2. Use process.env values to create the database connection
```

```
const db = mysql.createConnection({  
  
  host: process.env.DB_HOST || 'localhost',  
  
  user: process.env.DB_USER || 'root',  
  
  password: process.env.DB_PASS || '',  
  
  database: process.env.DB_NAME || 'my_app_db'  
  
});
```

```
// 3. Test the connection
```

```
db.connect((err) => {  
  
  if (err) {  
  
    console.error('Database connection failed: ' + err.stack);  
  
    return; }  
  
  console.log('Connected to MySQL Database successfully.');
```

Step 2: Starting the Backend Service (Running Server Remotely)

1. Verify that the database connection parameters in server.js match the Host, User, Password, and DB Name of your MySQL instance.
2. Start the Backend service with:

```
node server.js
```

(Or use PM2 to keep the service running continuously in the background:

```
pm2 start server.js)
```

Step 3: Frontend Installation and Setup (Client Side)

1. Open Terminal on your client machine or navigate to the Frontend project directory.
2. Install the necessary dependencies:

```
npm install
```

3. Start the Frontend application:

```
npm start
```

```
# or npm run dev (depending on the framework used, e.g., React / Vue /  
Vite)
```

4. Access the application via Web Browser at

<http://localhost:3000> (or the specified port).

2. Application Navigation

This section describes how to navigate and use the core features within the application.

Starting Point: Login Page

All users access the system through the Login page ("MY APP Archari") by entering their username/email and password, then clicking the "Login" button. If users do not have an account yet, they can click the "Register" link to create a new account. Upon successful login, the system verifies user permissions and redirects the user to the Home page corresponding to their assigned role.

Registration: Users can register by providing their username, email address, phone number, and password. The system also supports profile picture uploads (either selected from the local device or specified via a URL link).

2.1 Admin Navigation Routes

Admin Home Page

The Admin Home page consists of the following components:

- Header: Logo and application name "MY APP Archari", accompanied by an "admin" role badge and a profile icon in the top right corner.
- Search Bar: "Search by name or category..." input field with location/filter icons on the right side.
- "+ Add Product" Button: For adding new products to the system.
- Featured Collections: Image carousel displaying recommended collections (e.g., "Family Adventures").
- Most Popular: Product cards displaying popular items (e.g., Trek Marlin 7, Price: \$24,500, Status: In stock: 10) complete with edit (pencil) and delete (trash bin) icons.
- Bottom Navigation Bar: Quick navigation links for Home, Add, Order, and Settings.

Profile Management:

Clicking the profile icon navigates to the Edit User Profile page (where users can update their username, email, phone number, and profile picture). Click "Save Changes" to apply changes, "Logout" to return to the Login page, or "Back" to return to the Home page.

Admin User Profile Page

The Admin User Profile page consists of the following components:

- "← Back" Button: Located in the top left corner to return to the Home page.
- Profile Picture: Displayed as a circular icon with 2 options to update the image: "Choose file from device" (file upload) and "Enter image URL".
- Role Badge: "Role: System Administrator (Admin)".
- User Information Form:
 - Username: admin
 - Email: admin@gmail.com
 - Phone Number: 0987654321
- "Save Changes" Button: Orange button to save updated information.
- "Logout" Button: Light pink button to log out of the system.

Adding a Product:

From the Home page, click the "+ Add Product" button or the "Add" tab to open the "Add New Bicycle" modal window to input new product details. Click "Save" to save and return to the Home page, or click "Cancel" to discard.

Add New Bicycle Modal

The "Add New Bicycle" modal window consists of the following components:

- Header: "+ Add New Bicycle"
- Product Information Form:
 - Bike Name
 - Brand
 - Category
 - Price
 - Stock Quantity
- Image Section: Includes the instruction *"Image (Enter URL or choose from device)"*, along with an "Image URL" input field and a "Choose from device" button for local image uploads.
- Action Buttons: "Cancel" and "Save" (Orange button).

Editing a Product:

From the product list on the Home page, click the edit icon (pencil) to open the "Edit Bicycle" modal, which automatically populates with the existing product details. After making changes, click "Save" to apply the updates.

Edit Bicycle Modal

The "Edit Bicycle" modal automatically populates the form with the existing product details and consists of the following components:

- Header: "Edit Bicycle"
- Form Pre-filled with Existing Data:
 - Bike Name: Trek Marlin 7
 - Brand: Trek
 - Category: Mountain Bike
 - Price: 24500
 - Stock Quantity: 10
- Image Section: Displays the existing image URL along with a "Choose from device" button to update the image, complete with a preview of the bike image (Trek) below the input field.
- Action Buttons: "Cancel" (Discard changes) and "Save" (Save changes, Orange button).

Deleting a Product:

From the product list on the Home page, click the trash bin icon to delete an item. The system will prompt a confirmation dialog: *"Are you sure you want to delete this bicycle?"* Click "OK" to confirm or "Cancel" to abort.

Delete Confirmation Dialog

The delete confirmation dialog consists of the following components:

- Alert Message: *"Message from localhost:8081"* accompanied by the confirmation text *"Are you sure you want to delete this bicycle?"*
- Option Buttons:
 - "OK": Confirms the product deletion from the system.
 - "Cancel": Cancels the deletion and closes the dialog box.

Managing Customer Orders:

Click the "Order" tab to open the Customer Orders window, which is divided into 4 sub-tabs:

Pending Review, Approved, Rejected, and All. Each order displays the customer's name, email, date/time, total amount, shipping address, and proof-of-payment image. The administrator can click "Approve" to accept or "Reject" to decline the order.

Order Management Window

The "Customer Orders" window consists of the following components:

- Header: "Customer Orders" with a close button in the top right corner.
- Order Status Tabs (4 Tabs): Pending Review (currently selected tab, orange), Approved, Rejected, and All.
- Order Details (#7):
 - Status: "Pending Review", "Approved", "Rejected"
 - Customer: user01 (user01@gmail.com)
 - Date & Time: 3/9/2026 10:10:46
 - Total Amount: ฿65,015
 - Shipping Address: 1 Moo 2, Thung Sukhla Sub-district, Si Racha District, Chonburi
 - Proof of Payment: Payment slip image accompanied by the text *"Tap to view full slip"* to expand and view details.
- Action Buttons: "Reject" (Red button — decline order) and "Approve" (Green button — accept order).

2.2 User Navigation Routes

User Home Page

The User Home page displays a 3-item bottom navigation bar consisting of Home, Cart, and Settings (lacking permissions to add, edit, or delete products).

- Adding to Cart: Click the cart icon on a product card to add the item to your shopping cart.
- Filtering Products: Click the filter icon on the Home page to open the "Filters" window. Select your desired product category and price range, then click "Apply Filter" to view the matching products.

Product Filter Window

The "Filter" window consists of the following components:

- Close Button: Located in the top right corner to close the filter window.
- Category (CATEGORY): Selectable options for filtering product categories.
- Price Range (PRICE RANGE): Two numeric input fields—"Min" (฿0) and "Max" (฿500)—to specify the price boundaries for the product search.
- Bottom Buttons:
 - "Clear Filters": Resets all applied filter conditions to their default values.
 - "Apply Filter" (Orange): Applies the selected conditions to filter the product list.

User Profile Management:

Clicking the profile icon navigates to the Personal Information Edit page (Role: Standard User).

Users can update their information and log out in the same manner as the Admin role.

Shopping Cart Window

Clicking the "Cart" tab from the Home page opens the Shopping Cart window, which displays the selected items, individual prices, quantity control buttons, delete options, and the total order amount. Click the "Checkout" button to proceed to the payment process.

Shopping Cart Details

The "Your Cart" window consists of the following components:

- Header: "Your Cart" with a close button in the top right corner.
- Cart Items:
 - Product Details: Trek Marlin 7, Price: ฿24,500
 - Controls: Quantity adjustment field (showing 1) and a trash bin icon to remove the item from the cart.

- Divider: Line separating the itemized list from the total order sum.
- Total Amount: "Total: ₦24,500"
- "Checkout" Button: Orange button to proceed to the payment step.

Payment and Order Confirmation Process:

1. Initiate Payment: Click "Checkout" to display a QR Code for payment scanning.
2. Order Submission: The user fills in the shipping address, attaches proof of payment (attaches a slip image), and clicks "Confirm" to place the order, or "Cancel" to abort the transaction.
3. Success Notification: Upon successful confirmation, the system displays a "Payment Successful" notification showing the total paid amount.

QR Code Payment Window

The "Scan to Pay" (Payment) window consists of the following components:

- Header: "Scan to Pay"
- Total Amount: "Total Amount: ₺24,500" (Highlighted prominently in orange text).
- QR Code: Provided for users to scan and complete the bank transfer.
- Shipping Address Input: "Enter shipping address (House No., Street, District/Sub-district, Province)..."
- Instructional Alert: "Please scan and attach slip to confirm."
- "Attach Payment Slip" Button: Used to upload the payment receipt image.
- Action Buttons:
 - "Cancel": Cancels the payment and closes the window.
 - "Confirm": Disabled (grayed out) until the user enters a shipping address and attaches the payment slip.
- Background UI: Shows the User Home page with the cart icon displaying a badge count of "1" to reflect the item in the cart.

Confirming Payment:

Once the required shipping address and payment slip are provided, click "Confirm" to finalize the order submission.

Payment Confirmation Dialog

Upon entering the shipping address, attaching the transfer slip, and clicking the "Confirm" button, the final payment completion step displays the following component:

- Alert Box: A system pop-up titled *"Message from localhost:8081"* displaying the message *"Payment Successful: Thank you for your purchase. Total amount: ฿24,500"* along with an "OK" button to dismiss the notification and complete the workflow.

3 System Feature Summary

Below is the consolidated list of application features, detailing their operational scope and access permissions:

Feature	Description	Access Permissions
Authentication (Login / Register)	Authenticate using username/email and password, featuring a registration link for new users.	Admin, User
Product Management (Add / Edit / Delete)	Add, edit, and delete bicycle records (model name, brand, category, price, stock quantity, and image) with a deletion confirmation dialog to prevent accidental removals.	Admin only
Search & Product Filtering	Search items by name or category, and filter results by category and price range.	Admin, User

Feature	Description	Access Permissions
Featured Collections	Interactive image slider banner showcasing highlighted product collections.	Admin, User
Shopping Cart	Add/remove items, modify quantities, and automatically calculate total costs.	User only
QR Code Payment	Display dynamic QR codes based on order totals, collect shipping addresses, require proof-of-payment image uploads, and issue confirmation alerts upon successful payment.	User only
Order Management	Review, approve, or reject customer orders categorized by status (<i>Pending Review, Approved, Rejected, All</i>), complete with full order details and slip inspection.	Admin only

Feature	Description	Access Permissions
Profile Settings	Update username, email, phone number, and profile picture (via file upload or image URL link), with options to log out.	Admin, User
